5/2/25

Game Development Portfolio Site

This site is designed to be the next iteration of my professional portfolio. It is supposed to show off the many projects I've worked on throughout my life that relate to the field of game development.

As of 5/2/25 I am aware this portfolio site is not complete and has a long way to go. However for the purposes of ITP104 this is my submission for the final project.

In the coming weeks the plan is to complete the rest of the pages that correspond to the projects showcased on the homepage, and whatever else that a portfolio needs to contain. I'd like to add additional features in the future like transitions/transformations, HTML5 media tags showcasing videos, and responsive web design.

Currently Implemented Features:

- iframes
- JS or jQuery
